PROFILE

An object-driven web developer with more than 4 years of experience in frontend and backend development and has successfully delivered over 15 web applications to the clients with quality testing. Those years of developing experience has strengthened my capabilities in interpersonal communication, decision-making and problem solving and is now eager to break into a full-stack developer role.

API Gateways

PROJECTS

KONSULTAMD EMR

- Developed using HTML, CSS, Bootstrap, jQuery, PHP and MySQL.
- Designed to manage medical records of those subscribed users to the service during online telehealth consultation over the phone and videocalls.
- Built with electronic SMS and email prescriptions beneficial for patients to buy medicine prescribed by the doctors.

GISAUTO ADMIN PORTAL

- Designed to manage a 3 way payload self-service trigger API that can run a web service, a CRON job and download service logs.
- Able to grant dl groups access permission to trigger the service automation, access dashboard and reports and download automation logs.
- Developed using Vue, Vuetify, Vuex, RESTful APIs integrated with Jenkins pipeline for code and image scanning, unit autotesting before deploying the service in production environment.

JARVIS HYBRID LIVECHAT

- Set up for all Trend GIS service engineers to manage chat support requests on a 60secs support SLA and create a ticket in Jira.
- Built with react consuming data from AWS services like REDIS, S3 bucket, API gateway and elasticache.
